

Sun Safety

A Brief Summary

Skin cancer is considered an epidemic. Over one million new cases are expected this year. One in five Americans is expected to eventually get skin cancer, chiefly caused by exposure to ultraviolet (UV) radiation in sunlight. Health experts classify UV rays in the same group as other cancer-causing agents like asbestos, arsenic, and tobacco smoke. Both sunburns and tanning are outward signs of internal skin damage.

Personal Risk Factors

While any individual can get skin cancer – regardless of skin color – light-skinned people are at highest risk. Individuals are more likely to develop skin cancer if they have one or more of these characteristics:

- Fair skin
- Blue, green, or hazel eyes
- Light-colored hair
- Freckles
- A tendency to burn rather than tan
- A history of severe sunburns
- Have many moles (over 50)
- A personal or family history of skin cancer.
- Outdoor worker

Timing and Environmental Sun Safety Issues

UV radiation is more intense under certain time frames or conditions:

- From 10 a.m. to 4 p.m.
- When there is lack of thick cloud cover
- From mid-spring through mid-fall (also during winter at higher elevations)
- At higher altitudes

It is important to remember that outdoor work environments – especially between 10 a.m. to 4 p.m., from March through October – can be likened to a radiation chamber.

Skin Cancer Prevention

The recommended practices for preventing skin cancer are:

- Wear a wide-brimmed hat (at least 4-inch brim).
- Wear sunglasses that include a warranty stating that they provide 99 – 100 percent UVA and UVB (broad-spectrum) protection.
- Wear tightly-woven, loose-fitting clothing that covers as much of the body as possible, weather permitting.
- Liberally apply sunscreen – broad-spectrum (UVA and UVB) – to exposed skin 15 minutes before going outdoors.
- Reduce sun exposure from 10 a.m. to 4 p.m., when UV rays are strongest.
- Use lip balm with a SPF of 15 or greater.
- When feasible, stay under shade (trees, physical structures).
- Avoid tanning salons, booths, and sunlamps.
